BRYANSTON

Now in its third year, the Bryanston Education Summit has quickly become an established fixture in the educational calendar. Big enough to attract a wide range of speakers, but small enough to remain intimate and accessible, the Summit is unlike any other school-focused event in the UK. Each year it is themed to reflect the shifting priorities of teachers, and educationalists, as the academic year develops, and as sectors undergo far-reaching change.

- Sir Anthony Seldon will be speaking about Artificial Intelligence and what it might mean to teaching.
- Robert Plomin will be discussing how the latest research in genetics could help us understand how pupils learn.
- Claire Fox will be exploring the rise of identity politics and the snowflake generation.

And with a special focus on numeracy and literacy:

- Alex Quigley will be discussing how the bedrock of all learning – literacy – can be developed and the vocabulary gap bridged.
- Craig Barton will be assessing the best ways to improve how to teach maths.

There are many other speakers confirmed, including Alison Peacock, Alex Quigley and Nick Rose, and each will be engaging in debate, through presentations, panels, and informal conversations, raising questions, seeking solutions, and sparking constructive disagreements.

For anyone working in education today Bryanston's Education Summit is unmissable. Come with an open mind and take part in a stimulating day of professional development.
